These are all the files you need to make your own Vibration dampening camera/battery tray. More info can be found here:

http://rcexplorer.se/product/vibration-dampening-camerabattery-tray/

The 3D printed files are best printed at 0.1mm layerhight with 100% infill.

The cameraPlate2mm.stp can be CNC routed out of a 2mm thick G10 sheet. Use a 1.5mm bit or smaller.

You need 1.5mm thick piano wire to bend the wire as per instructed in the "Bend the wire this way.png"

Cheers,
David Windestål
